3 API Authorization

The mode of authorization shall be oauth2 for the production environment, where a set of credentials shall be generated for each partner. Using these credentials, a partner shall obtain a token and use it for all subsequent API calls as long as the token is valid.

Authentication payload:

```
{
  "username":
  "password":
}
```

The request returns a token. To authorize API requests, the authorization header is passed as "Authorization: Bearer" followed by the token string.

4 Base URL

The base URL to be used for each API call is

Will be provided later upon signing of contract
